Selected Characteristics for Nebraska Counties from the 2011-2015 American Community Survey

**Center for Public Affairs Research
University of Nebraska at Omaha**

May 2017

The University of Nebraska does not discriminate based on race, color, ethnicity, national origin, sex, pregnancy, sexual orientation, gender identity, religion, disability, age, genetic information, veteran status, marital status, and/or political affiliation in its programs, activities, or employment.

Legislature's Planning Committee: 2016 Associated Reports

The Nebraska Legislature's Planning Committee was created in 2009 with the passage of LB 653 in order to help establish a process of long-term state planning with the Nebraska Legislature. The committee was created to assist state government in identifying emerging trends, assets and challenges of the state and the long-term implications of the decisions made by the Nebraska Legislature.

Efforts during the first two years of the committee focused on the development of a database. The goals and benchmarks included in the database were developed and approved by the Legislature's Planning Committee to present a common-sense and data-driven assessment of key areas important to Nebraskans' quality of life. This database was a joint initiative with the Nebraska Legislature's Planning Committee and the University of Nebraska at Omaha's College of Public Affairs and Community Service (CPACS). The database was presented in a report that consisted of the data and summaries of the data for each of the nine categories of benchmarks established by the Planning Committee. Each year, the Planning Committee is in charge of updating the data for all benchmarks in each category. It is hoped that this will be of instrumental assistance to Legislators and staff as they craft and debate legislation each Session.

In addition to the statewide database, CPACS has prepared a series of Associated Reports for the Planning Committee that provides data for Legislative Districts, counties, and census tracts. These reports address the benchmarks established by the Planning Committee. These reports include:

- Nebraska Legislative District Quick Facts from the 2011-2015 American Community Survey
- Selected Characteristics for Nebraska Legislative Districts from the 2011-2015 American Community Survey
- Selected Characteristics for Nebraska Counties from the 2011-2015 American Community Survey
- Selected Characteristics for Census Tracts in Douglas, Sarpy, Lancaster, and Hall Counties, Nebraska, from the 2011-2015 American Community Survey
- Own Children with All Parents in the Labor Force for the State of Nebraska and Legislative Districts and Counties from the 2011-2015 American Community Survey
- Ratio of Income to Poverty Level for Children under 18 Years as a Percentage of the Population for Whom Poverty Is Determined for Nebraska Legislative Districts from the 2011-2015 American Community Survey

Introduction

On December 8, 2016, the U.S. Census Bureau released five-year American Community Survey (ACS) estimates for the combined years of 2011 through 2015, making available social, economic, housing and demographic statistics for Nebraska's counties. Also available are estimates for every community and legislative district in Nebraska and the nation.

The data are based on a rolling national sample survey mailed to about 3 million addresses each year, resulting in nearly 2 million final interviews each year from 2011 through 2015. By pooling several years of survey responses, the ACS can generate detailed statistical portraits of smaller geographies such as counties. The Census Bureau issues new sets of these five-year estimates every year, permitting users to track trends in even the smallest of areas over time. This is the fourth set of five-year estimates. Data also are available for the 2006-2010, 2007-2011, 2008-2012, 2009-2013, and 2010-2014 periods.

The new 2011-2015 ACS estimates are not related to the 2010 Census population counts that were released in 2011. The ACS complements the decennial count and provides estimates of population characteristics that are far more detailed than the basic demographic information that has been released from the 2010 Census.

The main function of the decennial census is to provide counts of people for the purpose of congressional apportionment and legislative redistricting. As a complete count of the population, the 2010 Census data are critical for knowing how many people live in the United States, where they live and their basic demographic information such as race, sex and Hispanic origin. The ACS estimates, on the other hand, are based on a sample survey of the nation and are intended to describe the social and economic characteristics of the U.S. population, not to provide population counts.

As a result, the ACS does not provide official counts of the population in between censuses. Instead, the Census Bureau's Population Estimates Program will continue to be the official source for annual population totals, by age, race, Hispanic origin, and sex.

For areas with populations of 65,000 or more (including the state of Nebraska; Douglas, Lancaster, and Sarpy Counties; and the cities of Lincoln and Omaha) the Census Bureau has produced 1-year ACS estimates every year since 2005. These areas require only one year of survey responses to produce reliable estimates.

Because it is a survey based on a sample of the population rather than the entire population, the ACS produces estimates, not actual counts. Since it is based on a sample, the ACS also is subject to sampling error. To aid data users, the Census Bureau calculates and publishes a margin of error for every ACS estimate it produces. These margins of error are not included in the following tables.

Table 1. Population by Age for Nebraska Counties: 2011-2015

| County | Total population | Aged Under 5 years | Aged Under 18 years | Aged 18 to 64 years | Aged 65 years or older | Aged 85 years or older | Aged Under 5 years | Aged Under 18 years | Aged 18 to 64 years | Aged 65 years or older | Aged 85 years or older |
|-----------------|---------------------|--------------------------|---------------------------|---------------------------|------------------------------|------------------------------|-------------------------------|------------------------------|------------------------------|---------------------------------|---------------------------------|
| | (Persons) | (Persons) | | | | | (Percent of total population) | | | | |
| Nebraska | 1,869,365 | 130,036 | 464,957 | 1,140,346 | 264,062 | 40,383 | 7.0 | 24.9 | 61.0 | 14.1 | 2.2 |
| Adams | 31,442 | 2,054 | 7,396 | 18,918 | 5,128 | 871 | 6.5 | 23.5 | 60.2 | 16.3 | 2.8 |

Definitions

Table 1. Population by Age

Age – The age classification is based on the age of the person in complete years at the time of interview. Both age and date of birth are used in combination to calculate the most accurate age at the time of the interview. Respondents are asked to give an age in whole, completed years as of the interview date as well as the month, day and year of birth. People are not to round an age up if the person is close to having a birthday and to estimate an age if the exact age is not known. An additional instruction on babies also asks respondents to print “0” for babies less than one year old.

Table 2. Population by Race and Hispanic Origin

Race – There are several concepts used to display and tabulate race information for the six major race categories (White; Black or African American; American Indian or Alaska Native; Asian; Native Hawaiian or Other Pacific Islander; and Some Other Race).

Race is a self-identification data item in which respondents choose the race or races with which they most closely identify. People may choose to report more than one race to indicate their racial mixture, such as “American Indian” and “White.”

The concept “race alone” includes people who reported a single entry (e.g., Korean) and no other race, as well as people who reported two or more entries within the same major race group (e.g., Asian). The race alone categories includes the minimum 5 race categories required by the U.S. Office of Management and Budget (OMB), plus the “some other race alone” included by the Census Bureau with the approval of OMB. The race alone categories in tables 2 and 3 are:

- White alone
- Black or African-American alone
- American Indian or Alaska Native alone
- Asian alone Native Hawaiian or other Pacific Islander alone
- Some other race alone

Hispanic Origin – Origin can be viewed as the heritage, nationality group, lineage, or country of birth of the person or the person’s parents or ancestors before their arrival in the United States. People who identify their origin as Spanish, Hispanic, or Latino may be of any race.

Table 3. Population by Race and Hispanic Origin as a Percentage of Total Population

See Table 2.

Table 4. Place of Birth and Citizenship Status

U.S. Citizen – Persons who indicated that they were born in the United States, Puerto Rico, a U.S. Island Area (such as Guam), or abroad of American (U.S. citizen) parent or parents are considered U.S. citizens at birth. Foreign-born people who indicated that they were U.S. citizens through naturalization also are considered U.S. citizens.

Not a U.S. Citizen – Persons who indicated that they were not U.S. citizens at the time of the survey.

Native – The native population includes anyone who was a U.S. citizen or a U.S. national at birth. This includes respondents who indicated they were born in the United States, Puerto Rico, a U.S. Island Area (such as Guam), or abroad of American (U.S. citizen) parent or parents.

Foreign Born – The foreign-born population includes anyone who was not a U.S. citizen or a U.S. national at birth. This includes respondents who indicated they were a U.S. citizen by naturalization or not a U.S. citizen.

Naturalized Citizens – Foreign-born people who identify themselves as naturalized. Naturalization is the conferring, by any means, of citizenship upon a person after birth.

Immigration Status – The American Community Survey questionnaires do not ask about immigration status. The population surveyed includes all people who indicated that the United States was their usual place of residence on the survey date. The foreign-born population includes naturalized U.S. citizens, lawful permanent residents (e.g., immigrants), temporary migrants (e.g., foreign students), humanitarian migrants (e.g., refugees), and unauthorized migrants (i.e., people illegally present in the United States).

Table 5. Educational Attainment for the Population Aged 25 Years or Older

Educational Attainment – Educational attainment data are tabulated for people aged 25 years or older. Respondents are classified according to the highest degree or the highest level of school completed. The question included instructions for persons currently enrolled in school to report the level of the previous grade attended or the highest degree received.

The educational attainment question included a response category that allowed people to report completing the 12th grade without receiving a high school diploma. Respondents who received a regular high school diploma and did not attend college were instructed to report “Regular high school diploma.” Respondents who received the equivalent of a high school diploma [for example, passed the test of General Educational Development (G.E.D.)] and did not attend college, were instructed to report “GED or alternative credential.” “Some college” is in two categories. “Some college credit, but less than 1 year of college credit” and “1 or more years of college credit, no degree.” The category “Associate’s degree” included people whose highest degree is an associate’s degree, which generally requires two years of college level work and is either in an occupational program that prepares them for a specific occupation, or an academic program primarily in the arts and sciences. The course work may or may not be transferable to a bachelor’s degree.

High School Graduate or Higher – This category includes people whose highest degree was a high school diploma or its equivalent, people who attended college but did not receive a degree, and people who received an associate’s, bachelor’s, master’s, or professional or doctorate degree. People who reported completing the 12th grade but not receiving a diploma are not included.

Bachelor’s Degree or Higher – This category includes people whose highest degree was a bachelor’s, master’s, or professional or doctorate degree.

Advanced Degree – This category includes people whose highest degree was a master’s or professional or doctorate degree.

Associate’s Degree Only --This category includes people whose highest degree was an associate’s degree. People who reported also receiving a bachelor’s, master’s, or professional or doctorate degree are not included.

Table 6. Ratio of Income to Poverty for the Population for Whom Poverty is Determined and Median Household Income in the Past 12 Months

Individuals for Whom Poverty Status is Determined – Poverty status was determined for all people except institutionalized people, people in military group quarters, people in college dormitories, and

unrelated individuals under 15 years old. These groups were excluded from the numerator and denominator when calculating poverty rates. Thus, the total population in poverty tables--the poverty universe--is slightly smaller than the overall population.

Specified Poverty Levels – To determine a person's poverty status, one compares the person's total family income in the last 12 months with the poverty threshold appropriate for that person's family size and composition (see example below). If the total income of that person's family is less than the threshold appropriate for that family, then the person is considered "below the poverty level," together with every member of his or her family. If a person is not living with anyone related by birth, marriage, or adoption, then the person's own income is compared with his or her poverty threshold. The total number of people below the poverty level is the sum of people in families and the number of unrelated individuals with incomes in the last 12 months below the poverty threshold.

Ratio of Income to Poverty – People and families are classified as being in poverty if their income is less than their poverty threshold. If their income is less than half their poverty threshold, they are below 50% of poverty; less than the threshold itself, they are in poverty (below 100% of poverty); less than 1.25 times the threshold, below 125% of poverty, and so on. As the ratio of income to poverty becomes greater, there will be more people who fall under the category, because higher ratios include more people with higher incomes.

Household – A household includes all the people who occupy a housing unit as their usual place of residence.

Total Income – Total income is the sum of the amounts reported separately for wages, salary, commissions, bonuses, or tips; self-employment income from own nonfarm or farm businesses, including proprietorships and partnerships; interest, dividends, net rental income, royalty income, or income from estates and trusts; Social Security or Railroad Retirement income; Supplemental Security Income (SSI); any public assistance or welfare payments from the state or local welfare office; retirement, survivor, or disability pensions; and any other sources of income received regularly such as Veterans (VA) payments, unemployment compensation, child support, or alimony.

Table 7. Population below Poverty as a Percentage of the Population for Whom Poverty is Determined (Poverty Rate)

See Table 6.

Family Households – A family consists of a householder and one or more other people living in the same household who are related to the householder by birth, marriage, or adoption. All people in a household who are related to the householder are regarded as members of his or her family. A family household may contain people not related to the householder, but those people are not included as part of the householder's family in tabulations.

Family households and married-couple families do not include same-sex married couples even if the marriage was performed in a state issuing marriage certificates for same-sex couples. Same-sex couple households are included in the family households category if there is at least one additional person related to the householder by birth or adoption.

Female Householder, No Husband Present – A family with a female householder and no spouse or householder present.

Table 8. Employment Status for the Population Aged 16 Years or Older

Labor Force – The labor force includes all people classified in the civilian labor force, plus members of the U.S. Armed Forces (people on active duty with the United States Army, Air Force, Navy, Marine Corps, or Coast Guard). The Civilian Labor Force consists of people classified as employed or unemployed.

Labor Force Participation Rate – The labor force participation rate is the percent of the population aged 16 years or older that is in the labor force.

Employed – This measure includes all civilians 16 years old and over who were either (1) "at work" -- those who did any work at all during the reference week as paid employees, worked in their own business or profession, worked on their own farm, or worked 15 hours or more as unpaid workers on a family farm or in a family business; or (2) were "with a job but not at work" --those who did not work during the reference week but had jobs or businesses from which they were temporarily absent due to illness, bad weather, industrial dispute, vacation, or other personal reasons. Excluded from the employed are people whose only activity consisted of work around the house or unpaid volunteer work for religious, charitable, and similar organizations; also excluded are people on active duty in the United States Armed Forces. The reference week is the calendar week preceding the date on which the respondents completed their questionnaires or were interviewed. This week may not be the same for all respondents.

Unemployed – All civilians 16 years old and over are classified as unemployed if they (1) were neither "at work" nor "with a job but not at work" during the reference week, and (2) were actively looking for work during the last 4 weeks, and (3) were available to accept a job. Also included as unemployed, are civilians who did not work at all during the reference week, were waiting to be called back to a job from which they had been laid off, and were available for work except for temporary illness.

Unemployment Rate – The unemployment rate is the percentage of the civilian labor force that is unemployed.

Table 9. Own Children Aged under 18 Years with All Parents in Labor Force

See Table 8.

Own Child – A never-married child under 18 years who is a son or daughter by birth, a stepchild, or an adopted child of the householder. In certain tabulations, own children are further classified as living with two parents or with one parent only. Own children of the householder living with two parents are by definition found only in married-couple families. (Note. When used in "EMPLOYMENT STATUS" tabulations, own child refers to a never married child under the age of 18 years in a family or a subfamily who is a son or daughter, by birth, marriage, or adoption, of a member of the householder's family, but not necessarily of the householder.)

All Parents in Labor Force – If a child lives with two parents, then both parents are in the labor force. If a child lives with one parent only, then that parent is in the labor force.

Table 10. Occupancy Status, Housing Tenure, and Median Value for Owner Occupied Housing Units

Housing Unit – A housing unit may be a house, an apartment, a mobile home, a group of rooms or a single room that is occupied (or, if vacant, intended for occupancy) as separate living quarters. Separate living quarters are those in which the occupants live separately from any other individuals in the building and which have direct access from outside the building or through a common hall. For vacant units, the

criteria of separateness and direct access are applied to the intended occupants whenever possible. If that information cannot be obtained, the criteria are applied to the previous occupants.

Both occupied and vacant housing units are included in the housing unit inventory. Boats, recreational vehicles (RVs), vans, tents, railroad cars, and the like are included, only if they are occupied as someone's current place of residence. Vacant mobile homes are included provided they are intended for occupancy on the site where they stand. Vacant mobile homes on dealers' sales lots, at the factory, or in storage yards are excluded from the housing inventory. Also excluded from the housing inventory are quarters being used entirely for nonresidential purposes, such as a store or an office, or quarters used for the storage of business supplies or inventory, machinery, or agricultural products.

Occupied Housing Unit – A housing unit is classified as occupied if it is the current place of residence of the person or group of people living in it at the time of interview, or if the occupants are only temporarily absent from the residence for two months or less, that is, away on vacation or a business trip. If all the people staying in the unit at the time of the interview are staying there for two months or less, the unit is considered to be temporarily occupied and classified as “vacant.” The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated people who share living quarters. The living quarters occupied by staff personnel within any group quarters are separate housing units if they satisfy the housing unit criteria of separateness and direct access; otherwise, they are considered group quarters.

Occupied rooms or suites of rooms in hotels, motels, and similar places are classified as housing units only when occupied by permanent residents, that is, people who consider the hotel as their current place of residence or have no current place of residence elsewhere. If any of the occupants in rooming or boarding houses, congregate housing, or continuing care facilities live separately from others in the building and have direct access, their quarters are classified as separate housing units.

Vacant Housing Unit – A housing unit is vacant if no one is living in it at the time of interview. Units occupied at the time of interview entirely by persons who are staying two months or less and who have a more permanent residence elsewhere are considered to be temporarily occupied, and are classified as “vacant.”

Value – Value is the respondent's estimate of how much the property (house and lot, mobile home and lot, or condominium unit) would sell for, if it were for sale.

Owner Occupied – A housing unit is owner occupied if the owner or co-owner lives in the unit even if it is mortgaged or not fully paid for. The owner or co-owner must live in the unit and usually is Person 1 on the questionnaire. The unit is “Owned by you or someone in this household with a mortgage or loan” if it is being purchased with a mortgage or some other debt arrangement such as a deed of trust, trust deed, contract to purchase, land contract, or purchase agreement. The unit also is considered owned with a mortgage if it is built on leased land and there is a mortgage on the unit. Mobile homes occupied by owners with installment loan balances also are included in this category.

Renter Occupied – All occupied housing units which are not owner occupied, whether they are rented or occupied without payment of rent, are classified as renter occupied. “No rent paid” units are separately identified in the rent tabulations. Such units are generally provided free by friends or relatives or in exchange for services such as resident manager, caretaker, minister, or tenant farmer. Housing units on military bases also are classified in the “No rent paid” category. “Rented” includes units in continuing care, sometimes called life care arrangements. These arrangements usually involve a contract between one or more individuals and a health services provider guaranteeing the individual shelter, usually a house.

Table 11. School Enrollment for Children Aged 3 and 4 Years

School Enrollment – Children are classified as enrolled in school if they were attending a public or private school at any time during the 3 months prior to the time of interview. The question included instructions to “include only nursery or preschool, kindergarten, elementary school, home school, and schooling which leads to a high school diploma, or a college degree.”

Enrolled in Public and Private School – This category classifies children who attended school in the reference period and indicated they were enrolled by marking one of the questionnaire categories for “public school, public college” or “private school, private college.” The instruction guide defines a public school as “any school or college controlled and supported primarily by a local, county, state, or federal government.” Private schools are defined as schools supported and controlled primarily by religious organizations or other private groups. Respondents who marked both the “public” and “private” boxes are edited to the first entry, “public.”

Table 12. Health Insurance Status for the Civilian Noninstitutionalized Population by Age

Health Insurance Coverage – Health insurance coverage includes plans and programs that provide comprehensive health coverage. Plans that provide insurance for specific conditions or situations such as cancer and long-term care policies are not considered coverage. Likewise, other types of insurance like dental, vision, life, and disability insurance are not considered health insurance coverage.

People were considered insured if they reported at least one “yes” to any of the following categories.

- Insurance through a current or former employer or union (of this person or another family member)
- Insurance purchased directly from an insurance company (by this person or another family member)
- Medicare, for people 65 and older, or people with certain disabilities
- Medicaid, Medical Assistance, or any kind of government-assistance plan for those with low incomes or a disability
- TRICARE or other military health care
- VA (including those who have ever used or enrolled for VA health care)

People who had no reported health coverage, or those whose only health coverage was Indian Health Service, were considered uninsured. For reporting purposes, the Census Bureau broadly classifies health insurance coverage as private health insurance or public coverage. Private health insurance is a plan provided through an employer or union, a plan purchased by an individual from a private company, or TRICARE or other military health care. Public health coverage includes the federal programs Medicare, Medicaid, and VA Health Care (provided through the Department of Veterans Affairs); the Children’s Health Insurance Program (CHIP); and individual state health plans. The types of health insurance are not mutually exclusive; people may be covered by more than one at the same time.

Noninstitutionalized Population – This population lives in noninstitutional group quarters such as college/university student housing, military quarters, and other noninstitutional group quarters such as emergency and transitional shelters for people experiencing homelessness and group homes. The institutionalized population is the population residing in institutional group quarters such as adult

correctional facilities, juvenile facilities, skilled-nursing facilities, and other institutional facilities such as mental (psychiatric) hospitals and in-patient hospice facilities.

Civilian Population – Excludes members of the U.S. Armed Forces (people on active duty with the United States Army, Air Force, Navy, Marine Corps, or Coast Guard).
